

Best Execution Cryptocurrency Trading Platform

CryptoBrokerage
Simple. Secure. Reliable

Who We Are

BestecX is the Best Execution trading platform of CryptoBrokerage. Described as the "Booking.com" of the cryptocurrency market, BestecX aggregates the best prices from multiple exchanges and allows users to compare and trade up to 1500+ cryptocurrencies at the best available prices globally.

Vision

BestecX's mission is to be the number one Best Execution gateway for crypto-currency trading within the crypto-currency ecosystem. By combining blockchain technology and artificial intelligence, BestecX aims to remove the technical, informational and price barriers faced by investors on all crypto-currency exchanges.

Challenges

Large persistent price differences: Across exchanges globally, price differences for many cryptocurrencies still persists. Discount averages reported have been between 2% and 20% higher on some exchanges leading to huge arbitrage differences.

Confusion among investors due to too many choices: Currently there are over 200+ exchanges where 1500+ tokens are traded. Frankly Choice is good but with numbers set to rise to over 300+ exchanges and 2500+ tokens by 2019, this availability of choices has resulted in confusion among investors.

Lack of transparency of commissions and fees on many exchanges: Poor visibility and transparency regarding fees across many exchanges has led to users being charged previously undisclosed fees to manage wallets, verify accounts, deposit and withdraw funds.

Price and Trading Volume manipulation: Lack of worldwide regulation across cryptocurrency trading has led to increased price and trading volume manipulation across the exchanges to demonstrate liquidity and drive users to their respective exchanges.

Complex technical architecture and infrastructure: Adoption of cryptocurrencies by the mainstream public remains limited due to the complex technical infrastructures of many exchanges, wallets and cryptocurrencies. Transacting and moving money across exchanges remains a problem with limited places where cryptocurrencies are actually accepted.

Solutions

Best Execution Prices: Trading platform where users can trade up to 1500+ cryptocurrencies from more than 200+ exchanges at the best available prices from a single platform.

Informational Terminal: Accessible portal with up to date news, legitimate cryptocurrency rating systems, support and educational materials to help users navigate the cryptocurrency market and make smarter and confidence investments.

Single Integrated Gateway: Single log-on process that provides access to various cryptocurrencies listed on multiple exchanges; No more managing multiple log in details, multiple passwords, multiple KYC and onboarding.

ICO Platform: An investment platform where carefully shortlisted projects would be available during both pre-sale and public sale. Funds raised from our users would only be released to projects when agreed milestones have been met by chosen projects.

Investment Platform: Accessible to all, a secure and easy to use platform based on the expertise of professional traders supported by Artificial Intelligence to facilitate a combination of predictive solutions, aggregation of best opportunities and support decision making.

Payment APP: BEXT App will allow users to make fast and secure payments in stores either by cryptos or Fiats. Users will also be able convert cryptos to Fiat. Make faster payment than using conventional methods such as debit or credit card.

Benefits

- ✓ Safe and secure universal gateway for all trading
- ✓ World class aggregator function to consolidate the best available prices
- ✓ Fully integrated real time consolidated data feed
- ✓ Decision-making capability supported by Artificial Intelligence (AI) to guide users
